

More Information for UNITED IGNITION WIRE COP13

United Premium OEM replacement COP coil

United Ignition Wire Coil Features:

- The copper wire used inside the coil windings is a low porosity drawn wire. Low porosity wire ensures a consistent current flow throughout the bobbin inside the coil. The wire is coated to help prevent shorts between the windings, under extreme load and acceleration.
- The outer shell of the coils are made with a high dielectric strength polymer that helps prevent current grounding associated with lower quality plastic that is used on economy grade coils. The high glass fill polymer helps the housing to maintain flexibility during thermal shock cycles, associated with frequent hot and cold cycles.
- High dielectric strength epoxy is used to seal the windings inside the case, to prevent thermal breakdown and to prevent moisture from contaminating the

copper.

UNITED IGNITION
WIRE Warranty Information
United Premium & Marine Wire
Sets - Lifetime. United
Permashield Wire Sets - 5 yr /
50,000 miles. Distributors - 12
months. Electrical Parts - 90
days (this would include: coils,
modules, caps, rotors,
solenoids and regulators).
Battery Cables - 1 year. NOTE:
Removing the tamper proof
sticker on coils and modules
will void the warranty.
