* Jaguar will only honour the Corrosion Protection Limited Warranty for aluminum vehicles repaired using approved parts, tools, equipment and trained technicians within the Jaguar Authorized Aluminum Repair Network (JAARN). For vehicles that have had collision, body or paintwork repaired outside the JAARN, this Corrosion Protection Limited Warranty may not apply. It is therefore recommended that all cosmetic body repair parts and body repairs are only performed within the JAARN.

** Towing provision for collision repair is only applicable during the original 4 year/80,000 km original warranty period. Any body corrosion damage not associated with previous repairs will be provided as part of the Corrosion Protection Limited Warranty for up to 6 years and unlimited mileage. Corrosion damage associated with previous repairs are handled as follows: Towing charges and repairs are to be arranged and charged to the original repair facility and are not covered by the Jaguar warranty.

***Listing as of April 2006. Jaguar-authorized structural repair centres are also certified to perform non-structural aluminum collision repair. If you do not live near one of these locations please see your local Jaguar dealer for further information on aluminum repairs.

Benefits of the Jaguar Authorized Aluminum Repair Network

Jaguar has established the Jaguar Authorized Aluminum Repair Network to service the collision repair needs of its XJ and XK models.

There are two categories of collision repairs:

1. Non-structural repairs: these are cosmetic in nature, consisting of ding and dent repairs, panel replacement and paintwork.
2. Structural repairs: these involve cutting, welding, bonding of metal, straightening of frame damage and riveting.

To help ensure the most efficient repair process, each Jaguar Dealer is aligned with authorized local repair centres.

It is essential that all body and paint repairs, whatever their nature, be conducted by an authorized repair centre.*

A structural collision repair solution is available at one of our specially selected centres that have met our stringent Jaguar standards. These centres will service the repair needs of XJ and XK models.

The Jaguar Authorized Aluminum Repair Network helps ensure that your vehicle receives the utmost care and attention. Here are some of the benefits of this exclusive network:

- Staffed with certified technicians and equipped with Jaguar tested and approved tools and equipment.
- The only source for genuine Jaguar aluminum repair parts, which carry a Jaguar parts limited warranty.
- Self-contained aluminum repair environments prevent the possibility of cross-contamination and corrosion from steel particles.
- If damage is determined to be structural in nature to any aluminum-bodied XJ or XK model, Jaguar will provide complimentary flatbed transportation to the nearest structural repair centre.**
- This service will be provided at no cost to the customer during the new-vehicle limited-warranty period.

Frequently asked *Questions*

Q What should a customer do in the event of a collision in their aluminum-bodied XJ or XK?

A The customer should contact their local Jaguar Dealer. The Jaguar Dealer and their local Jaguar Authorized Aluminum Repair Centre will assess the damage and identify repair needs.

Q What are the risks and consequences if an aluminum-bodied XJ or XK is repaired outside of the network?

A Repairs performed by untrained technicians at an unauthorized repair centre may compromise the structural integrity of the vehicle, thus reducing its residual value. In addition, aluminum repairs performed outside a self-contained environment may expose the vehicle to cross-contamination and cause corrosion.

Q Are there any repairs that a non-certified independent repair centre can perform on an aluminum-bodied XJ or XK?

A Jaguar does not recommend or encourage aluminum collision repairs outside the authorized and trained network, including ding and dent repair and/or windshield replacement.
