Multiple Annunciator Faults 2006 XJR

Apparently I have not been challenged enough with the weekend posts about water in the passenger footwell and bonnet latch.

I get in the car and turn the ignition key only to be faced with both yellow and red warning lights and a scrolling list of faults cycling where the mileage is normally displayed.

Faults displayed were:

- Parking Brake Fault
- Gearbox Fault
- Apply Foot and Parking Brake and Cannot Apply Parking Break
- Air Suspension Fault
- Tyre System Pressure Fault
- Low Brake Fluid
- DSC Not Available
- ABS Fault
- CATS System Fault.

I started by checking battery voltage which was 12.24 VDC on my Three Year Old EXIDE Extreme replacement for the Varta. I hooked up a quick reply (<https://www.jaguarforums.com/forum/xj-xj6-xj8-xjr-x350-x358-28/multiple-annunciator-faults-2006-xjr-218967/#post2083176>) for the jumper cables to my heavy duty heavy pickup and used a jumper at 12.18 VDC with the truck running it did not give me codes.

Car ran fine on Saturday and Sunday cvcn after the floor was wet.
