

The POR15 Experience

After etching it with POR15's "AP120 Metal Prep:"

pre

Before proceeding further, I filled all the threaded holes with candle wax – easiest method I could think of to prevent paint from fouling the threads. Figured I'd just hit it with the heat gun after the paint cured and it would come running out. After the first coat of POR15:

I took special care to liberally coat the internal surface of the plug bores:
