## Garage Door Opener – Additional Instructions – Canada Only

MODEL 1995 MY  
Sedan Range  
VIN  
720001-ON

Additional instructions on the programming of the Garage Door Opener were inserted into later editions of the Drivers Handbook.

These instructions are repeated below to enable Dealer personnel to deal with customer queries regarding programming of the transmitter.

“NOTE: (Canada only) During programming, the hand-held transmitter may automatically stop transmitting after one or two seconds, which may not be long enough for the GDO to be programmed.

If you are programming using one such transmitter, the GDO red indicator light may prompt you to re-activate your hand-held transmitter by emitting a series of double flashes.

After re-activating your transmitter (Operations 4 and 5 on pages 24 and 25 of the Drivers Handbook), the GDO indicator light should flash rapidly indicating successful programming.

If it returns to the slow flash, continue the procedure until a successful programming operation is indicated by the rapid flashing signal.”
