

## **Jaguar Wiring Colours.**

The following is the colour code for Jaguar wiring:

N = Brown  
U = Blue  
R = Red  
K = Pink  
P = Purple  
G = Green  
L = Light (as a prefix)  
S = Slate  
W = White  
Y = Yellow  
B = Black  
O = Orange

What I know from too many years with Jaguars wiring system.

- 1) Brown (U) is Battery HOT (Live in some languages)
- 2) Brown with Black stripe (UB) is “generally” a battery SWITCHED wire.
- 3) Black (B) is always EARTH. BUT, watch out in the dash area for ODD looking Black wires, they are NOT wires, they are the fibre Optic strands.
- 4) White (W) is “generally” to do with Ignition, as in coil etc.
- 5) Green (G) as generally been associated with sensors, as in Temp etc.

The rest is anyones guess. I have never found a good pattern to any of it.

You get used to it, hence the saying from myself and others, NE WIRE AT A TIME.
