

De-select DTC

Once the select DTC for erasure symbol is displayed adjacent to the DTC, select the **Erase DTC** button.

Erase DTC

The DTCs will be erased, providing the fault is not present.

The **Select / De-select Button** may also be used to select or de-select DTCs for clearing.

Select / De-select Button

S93 Report

S93 Report Sub-Tab

The S93 sub-tab provides a method to generate an S93 report, a specific extract of freeze frame data is taken from the Powertrain Control Module (PCM) together with software and calibration data from other modules to produce a document required by CARB/EPA. In US markets it is a legislative requirement that an OBDII report is completed and returned to the manufacturer

whenever an emission related failure occurs (i.e. MIL on). The IDS version of this document is called the S93 report.

From the S93 sub-tab, you can:

- Generate the S93 report for the current vehicle
- Display the report for your viewing
- Save the report locally on IDS
- Open an existing report from any session which is stored locally on the IDS
- Print the report
- Send it over the Internet to Jaguar Cars LTD
