

**Start point – I think**

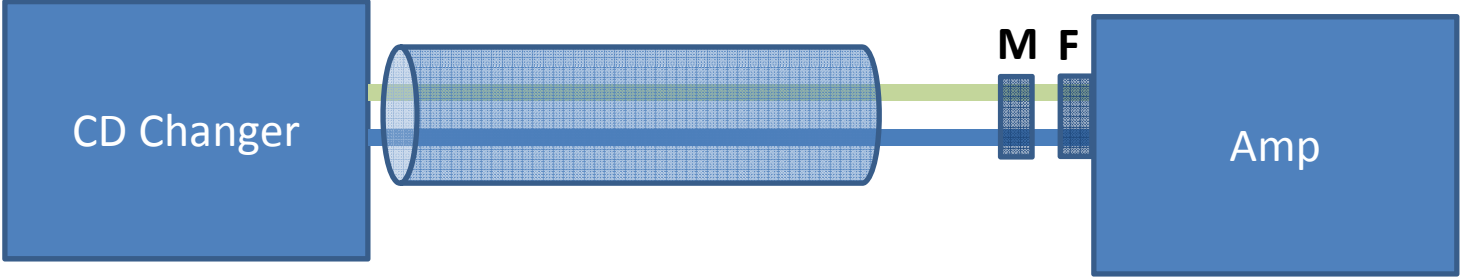

**What I think I have on my XKR – premium sound, no navigation**

# Option 1 – Use PIE ALP AI-AUX

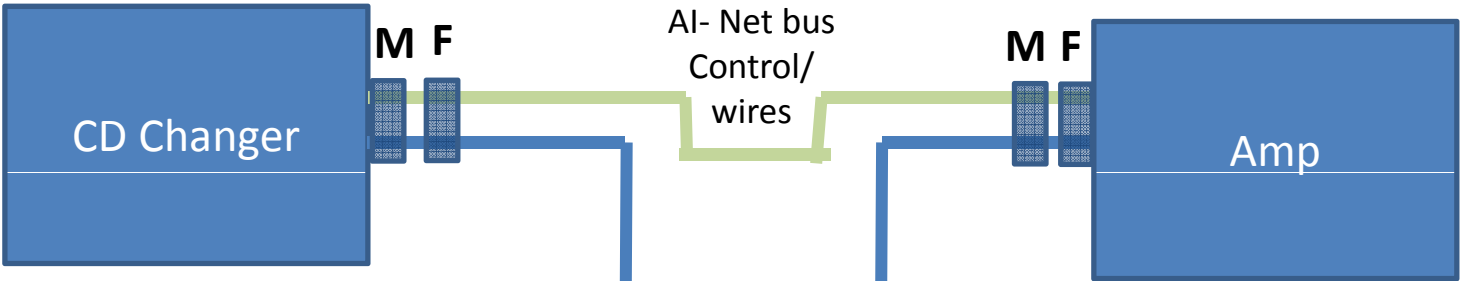

Create using an active PIE ALP AI-AUX to create an Aux.  
Big question for me – will be Jag XKR MY2000 with premium audio with extra amp but no navigation be able to use this config?

**Option 2 – Create an Ai-Net cable, intercepting and diverting audio to RCA connectors**

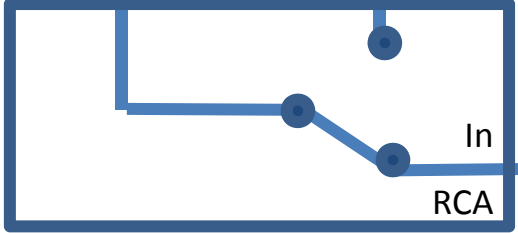

Standard AiNet cable from CD changer

Ai- Net bus Control/wires

Tap into Ai- Net Audio wires (have instructions from forums)

Creating a passive cable to spoof head unit it is connected to a CD, while audio is rerouted to RCA connectors to act as an Aux input. Maybe have a switch to be able to reinstate CD and bypass RCA option

New cable to centre console 3.5mm Jack
